This project tends to use the knowledge from WIFI esp8266 to act as a server and receive message through the help of MQTT broker (publish to topic OutTopic) and get the message from MQTT program

Here is a video.

We're sorry for misinterpreting the use of WIFI in the client side. We figured it out later that the message can be obtained easily by MQTT broker and the implementation of code in python (using Paho MQTT library)

<https://goo.gl/TBQf6M>

It's joyful studying this kub :>
